CAREER OBJECTIVE

A passionate and driven AI professional with hands-on experience in machine learning, deep learning, and natural language processing, seeking a challenging role where I can leverage my technical expertise to develop innovative AI solutions. Eager to contribute to impactful projects in a dynamic environment, while continuously expanding my knowledge and skills in artificial intelligence to address real-world problems through cutting-edge technologies.

TECHNICAL SKILLS

Languages: Python, JavaScript, Latex

AI Library: Pytorch, Tensorflow, Scikit-learn, Pandas, NumPy, Matplotlib, Seaborn

AI Domain: ML, DL, NLP, LLM, RAG, AI Chatbot, AI Agent, openAI, HuggingFace, MLOPs.

Web Scraping: Selenium, bs4, Parsing Data, CAPTCHA Solving, OCR

Version Control: Git, Github

Software and Tools: VS Code, Google Colab, Kaggle Notebook, Jupyter Notebook, Supervisely

Database: MySQL, MongoDB

Web: HTML, CSS, Tailwind, Bootstrap

OS: Linux, Windows

EXPERIENCE AND TRAINING

Trainee Machine Learning Engineer at Nogor Solution Limited.

I Completed the training season named 'Trainee Machine Learning Engineer' at Nogor Solution Limited. It is a 3-month Government training program offered by **Bangladesh Computer Council (BCC)**, **Enhancing Digital Government and Economy (EDGE)**, and, **Institute of Information Technology (IIT), Dhaka University**. The main aim of this project is to promote human empowerment in the AI sector in Bangladesh. I learned hands-on projects varies AI field like ML, DL, NLP etc

AI PROJECTS

Music Genre Classification | *Python, DL, Tensorflow, Kaggle*

[Kaggle](#)

Built a deep learning model using TensorFlow to classify music tracks into genres based on audio features and spectrograms, leveraging CNNs for efficient audio pattern recognition.

Potato Disease Classification | *Python, Tensorflow, DL*

[Github](#)

Developed a CNN-based model using TensorFlow to classify potato leaf diseases (Early Blight, Late Blight, Healthy) from images, enabling accurate and automated plant disease detection.

Telegram Chatbot | *Python, LLM, RAG, OpenAI*

[Github](#)

I developed an intelligent Telegram chatbot by integrating OpenAI's GPT model using Python. The bot can engage in human-like conversations, answer queries, and perform basic tasks, simulating a virtual assistant within Telegram. I utilized the Telegram Bot API for handling user messages and OpenAI's API for generating dynamic, context-aware responses.

EDUCATION

North South University, Bangladesh

2017 - 2023

Bachelor of Science in Computer Science

Narsingdi Govt. College, Narsingdi, Bangladesh

2013 - 2015

Higher Secondary Certificate

Alijan J.M Academy, Narsingdi, Bangladesh

2008 - 2013

Secondary School Certificate

ACADEMIC THESIS

Semi-autonomous Wheelchair with Real-Time Object Detection

[Github](#) 

| *YOLOv7, RaspberryPi, Arduino, Proteus, RobotCar, Supervised Learning, Python*

- Develop a semi-autonomous wheelchair system that can detect real-time objects using a webcam.
- *Arduino* based wheelchair control with hand gesture, and simulated with *Proteus*.
- *YOLOv7* for object detection and integrated with *RaspberryPi*.

ACADEMIC PROJECTS

Potato Disease | *AI, ML, DL, Tensorflow, Python*

[Github](#) 

A machine learning system that can detect if there are early blight and late blight diseases in potato plants. The goal of this project is to accurately identify those diseases so that farmers can take step

Patient's Condition Classification Using Drug Reviews | *AI, ML, NLP, Python*

[Github](#) 

We build a system by using both *machine learning* and *Natural Language Processing* that can identify the disease with the help of patient's condition review.

Earthquak Detection | *Microprocessor, Arduino, Vibration Sensor, Proteus*

[Github](#) 

Build a microprocessor system by using *Arduino, Vibration Sensor*, and *Proteus* that can detect vibration it helps to identify the earthquake.

HONOURS AND AWARDS

- Honorary Mention at NSU Project Showcase Fall 22 for 'Semi-autonomous Wheelchair with Real-Time Object Detection' for a senior project at the university.

INTERESTS

- Machine Learning
- Deep Learning
- Data Analysis
- NLP, LLM, RAG
- Python Developer
- MLOPs
- AI Agent, Chatbot
- Database
- Web Development
